Publication Information: Product Security throughout the life cycle of Bosch Building Technologies' products and services

Dear Customer,

In order to provide secure and reliable products for our customers, we have established security and data protection as fundamental requirements of our products during the entire life cycle. This includes the use of Security Verification and Validation Techniques, such as **Penetration Testing**.

Our **Security Engineering Process** is a core part in our product development. Whenever we develop a new product, we conduct a comprehensive **Threat and Risk Analysis**, and create an individual **Security Concept** for the product and its integration into a complete solution. During design phase and before release we ensure product security by **comprehensive testing (security and penetration tests)**. Any following updates, patches or upgrades will undergo the same rigorous tests, and will only be deployed once they have proven to be secure.

Yours sincerely

Bosch Building Technologies
